

DOT

Door Operator Translator

Product Overview

The **DOT (Door Operator Translator)** is a plug-and-play solution designed to bridge the gap between proprietary systems and modern efficiency. Effortlessly replace proprietary DMC door operators with discrete alternatives using existing infrastructure.

Strategic Solutions & Sales Advantages

Plug-and-Play: Get systems running instantly with no complex setup.

Avoid Costly Full-Scale Modernization: Upgrade problematic operators independently without requiring a complete system overhaul.

Future-Proof Design: Stay compatible with modern electronics and controllers during future full-scale upgrades.

Strategic Component Upgrade: An ideal entry point for phased modernization or modular site improvements.

Seamless Legacy Transition: Swap proprietary parts for discrete alternatives without compromising the original controller.

Feature

Specification

Compatibility

Works with TKE
Dover DMC

Interface

Serial Communication
& Gate Switch

Setup

Pre-configured; No
programming required

Installation

Inline Plug-and-Play

Why Choose the DOT?

The DOT removes the barriers of expensive proprietary parts and exhaustive reprogramming. It offers a **hassle-free upgrade path** that saves time on-site and reduces long-term maintenance overhead.
